

Kyle Mathias

Marketing Technology Solutions Architect | Integrations · iPaaS · MarTech

kylemathias@gmail.com | (510) 304-1724 | Bay Area, CA | linkedin.com/in/kylemathias | kylemathias.com

Marketing Technology Solutions Architect with 7+ years connecting marketing platforms, automating workflows, and onboarding systems across enterprise MarTech stacks. Designs integrations across SFDC, Marketo, Tray.io, and analytics/reporting tools; builds fit-for-purpose solutions when off-the-shelf products do not exist. Proven at bridging business requirements with technical implementation—delivering cost savings, data accuracy, and faster reporting for marketing and cross-functional teams.

Work History

Marketing Technical Program Specialist

May 2023 - Current

NetApp, Inc. | San Jose, United States

- Architected and launched an Asset Database (centralized searchable repo for web pages, PDFs, videos) used by ~350 marketers; improved asset discoverability, cut duplicate content and translation costs, and reduced average search time by ~10 minutes per user.
- Designed and productionized a retrieval-augmented knowledge pipeline (scrape -> chunk/markdown -> OpenAI embeddings -> Cosmos DB vector store) for an internal Tray.io-orchestrated Merlin agent; implemented chunking strategy, embedding versioning, and a priority fallback DB to improve relevance and reduce manual lookups across ~7,500 pages in 9 languages.
- Led integrations and automated data exports for NetApp INSIGHT attendee workflows: built SFTP export pipelines and mapped/integrated SFDC, Marketo, and GARD datasets for DSS ingestion and Power BI reporting; automated registration enhancements and sales-order passes to eliminate manual processing, accelerate reporting, and enable near-real-time attendance dashboards for event stakeholders.
- Implemented a multi-year extension to the PowerApps Marketing Travel Request system, preserving UX while adding long-term expense tracking and cost transparency for ~350 marketers.

Application Administrator

April 2021 - May 2023

NetApp, Inc. | San Jose, United States

- Engineered and deployed a custom Chrome Extension for web page scraping, automating the extraction of content, images, links, and metadata from over 7,500 pages in 9 languages on netapp.com, reducing manual scraping time from approximately 1 hour to 5 minutes per page.
- The Chrome Extension achieved annual cost savings of \$500,000 by replacing a third-party SaaS product and significantly improved content accuracy to 100% by directly capturing live page data.
- Developed and implemented a Digital File Ingestion Form and automation workflow that processes ~100 assets per quarter, saving 1-2 SLA days by automating handoff to content auditors and the Web Development Queue upon approval.
- The automated intake process reduced errors and improved data accuracy through structured input requirements for asset submissions, integrating the form, Asana, and Bynder using Tray.io as an integration intermediate.

Web Quality Analyst

October 2019 - April 2021

NetApp, Inc. | San Jose, United States

- Ensured web quality and consistency across 8 languages for netapp.com during a major site redesign by designing and implementing an automated scanning system, significantly increasing testing efficiency.
- Collaborated with cross-functional development and localization teams to identify, document, and resolve ~200+ defects per release cycle, reducing post-launch issues and accelerating time-to-publish.

Web Publisher

June 2018 - October 2019

NetApp, Inc. | San Jose, United States

- Published and maintained web content for netapp.com, utilizing content management systems and ensuring adherence to brand guidelines and quality standards.
- Managed publishing workflows for 500+ pages across 8 localized sites, coordinating with translation vendors and marketing stakeholders to meet campaign deadlines.

Software Engineer Intern → Mobile Intern Lead

March 2017 - May 2018

Open Learning Exchange | Remote

- Promoted from intern to mobile lead; led development of OLE's BeLL educational software using Vagrant, VirtualBox, CouchDB, JavaScript, and HTML.
- Developed and maintained a Take Home Android application using Android Studio, XML, and Java.
- Managed project workflow and version control utilizing Git and GitHub.

Education

Bachelor of Science in Computer Science

January 2016

San Jose State University | San Jose, California

Skills

- **Automation & iPaaS:** Tray.io, Power Automate, PowerApps
- **APIs and Integration:** HTTP, JSON, pagination, rate limits, OAuth 2.0, SSO, JWT-like token patterns, webhooks, SFTP
- **Languages & Frontend:** JavaScript, HTML, CSS, Bootstrap, Vue.js
- **Backend & Web:** Sails.js, Nginx, REST APIs
- **Cloud & Data:** Microsoft Azure, Cosmos DB (vector search)
- **AI & Retrieval / RAG:** Retrieval-Augmented Generation (RAG) concepts, OpenAI embeddings, embedding versioning, chunking strategies, vector search, agent orchestration
- **DevOps & Source Control:** Azure DevOps, Git
- **Extensions & UI Tools:** Chrome Extension Development, DataTables.net
- **Security & Identity:** Azure Entra ID, SSO configuration, SSL/TLS, data provenance & access controls
- **Project & Workflow:** Project Management, Jira, Asana
